Compare un messaggio di conferma dell'avvenuto download. Nel messaggio sono anche indicati i programmi necessari per la lettura a secondo del device utilizzato.

Per leggere l'ebook sul proprio pc, per esempio, è necessario il programma Adobe Digital Editions ed è possibile scaricarlo gratuitamente dal sito di EBSCO.

Grazie a questi programmi è possibile gestire il prestito anche dal proprio device.

Da pc, con Adobe Digital Editions è possibile visualizzare i titoli in prestito, la scadenza dei singoli prestiti e anche restituire prima della scadenza.

Per effettuare la restituzione direttamente da Adobe Digital Editions, cliccare con il tasto destro sull'immagine della copertina e selezionare **Restituire elemento in prestito**.

È comunque sempre possibile verificare lo stato degli ebook in prestito dalla propria area personale sul sito EBSCOHost.

Dynamical Systems in Neuroscience : The Geometry of Excitability and Bursting

Series: Computational Neuroscience

Authors: Izhikevich, Eugene M.

Publication Information: Cambridge, Mass : The MIT Press. 2007

Resource Type: eBook.

Description: In order to model neuronal behavior or to interpret the results of modeling studies, neuroscientists must call upon methods of nonlinear dynamics. This book offers an introduction to nonlinear dynamical systems theory for researchers and graduate students in neuroscience. It also provides an overview of neuroscience for mathematicians who want to learn the basic facts of electrophysiology. Dynamical Systems in Neuroscience presents a systematic study of the relationship of electrophysiology, nonlinear dynamics, and computational properties of neurons. It emphasizes that information processing in the brain depends not only on the electrophysiological properties of neurons but also on their dynamical properties. The book introduces dynamical systems, starting with one- and two-dimensional Hodgkin-Huxley-type models and continuing to a description of bursting systems. Each chapter proceeds from the simple to the complex, and provides sample problems at the end. The book explains all necessary mathematical concepts using geometrical intuition; it includes many figures and few equations, making it especially suitable for non-mathematicians. Each concept is presented in terms of both neuroscience and mathematics, providing a link between the two disciplines. Nonlinear dynamical systems theory is at the core of computational neuroscience research, but it is not a standard part of the graduate neuroscience curriculum – or taught by math or physics department in a way that is suitable for students of biology. This book offers neuroscience students and researchers a comprehensive account of concepts and methods increasingly used in computational neuroscience. An additional chapter on synchronization, with more advanced material, can be found at the author's website, www.izhikevich.com.

Subjects: Neurosciences
Neurology
Neurons
Differentiable dynamical systems
